NOTES:

- Strengthened Connection Straps provide more rigidity to panel connections, especially when not tied into a station with a worksurface or storage, i.e., when Coordinate™ Height Adjustable bases are used or when using panels strictly to divide space without tying in other components.
- Connector strap type should be specified based on the tallest panel connection type. Connector straps and posts are specified separately.
- Lower height panels will connect with variable height trim.
- See examples below.
- Connector straps can be retrofitted on any existing Accelerate® stations that were produced from April 2016 to present.
- Will fit on existing connector posts — only straps would need to be specified.
- Single Straps (HECSI) are used when power poles enter at the connector post and in variable height applications where the tallest panel is a single and one or more panels is lower.

ⓘ Available in Graphite paint only.

ⓘ When specifying panel-hung worksurfaces, specify external channel as if supported by two H-legs or O-legs via selection chart.

ⓘ When specifying a 54"W or 60"W Floating Modesty Panel, it is not necessary to specify an external channel.

NOTES:

- Easy-care, scratch-, spill- and stain-resistant laminate over 1/8" solid core high-performance particleboard.
- Grain direction on all worksurfaces runs horizontal.
- One flat bracket (mounting plate) ships with each worksurface for applications requiring connection to an adjoining worksurface.
- For standing-height requirements, use worksurface with 41"H laminate L-shaped end panel or metal O-leg.
- For 30", 36", 42" and 48"W x 24"D mobile desks and tables, use post leg with casters model HMBPOST.C.
- For end panels, legs, columns and bases, see the Worksurface Supports listing on pages 261-262.
- When using a floating modesty panel or an external channel under the worksurface, the depth clearance for keyboard trays and center drawers decreases by 8". See accessory matrix in accessory section of the pricer.

ⓘ 84"W worksurfaces are for 29 1/2"H applications only (not 42"H) and require a T-support brace or other weight-bearing floor support to be positioned between the O-legs or L-shaped end panels.

ⓘ Worksurfaces are subject to slight bowing. The magnitude of the deflection is dependent upon the weight, placement, and duration of the load.

ⓘ When using a worksurface as a bridge, no additional supports are needed. One support is required for returns, two supports are required for desks and credenzas.

ⓘ External channel support is recommended for extended unsupported spans or heavily loaded worksurfaces. See above for details.

- Wall mounted storage cabinet door design overlaps end panels so that when multiple units are placed side-by-side they appear as one continuous unit.
- Laminate doors are non-locking.
- Horizontal interlocking rails are included; due to varying types of walls, installers are responsible for selecting and supplying the appropriate fasteners. Tackboard widths differ slightly from wall mounted storage cabinet widths. - ! Wall mounted storage cabinet attachment requires individual cabinets be secured by a minimum of two wall mounting locations/studs.
- ! Wall mounted storage cabinets are designed for interior and perimeter walls that are constructed with wood or metal studs.
- ! The HON Company is not responsible for any liabilities resulting from wall mounted storage cabinets that are not properly installed.

EMPOWER® Step-by-Step Guide

WORKSTATIONS

STEP 1: LEGS

U-leg or angled leg available for dual-sided, single-sided, and 120° applications. NOTE: Gallery Panels act as supports for fixed height Empower® and will replace the leg.

Gallery Panels: Specify your Empower®-specific Gallery Panel Kit along with your desired gallery panel from the “Gallery Panels” section. See pages 455-488.

STEP 2: SUPPORT BEAMS

Support Beam(s) required for all worksurfaces. See page 414 for details.

STEP 3: TROUGHS

Used to route electrical and data to the workstations. Must be installed in between all supports and match the width of the support beams.

STEP 4: ELECTRICAL

Electrical components mount to the trough and mounting hardware is included with the trough model.

STEP 5: WORKSURFACES

Select worksurfaces as appropriate for your application. Worksurface width should match beam size. Worksurface depth should match end leg size. See page 416 for details.

STEP 6: OPTIONAL ACCESSORIES

Screens: Specify an Empower®-specific shared screen or select from several Universal Screens options (fixed above/below, up mount, side mount, front-to-back, sit-on-surface, top mount, modesty, and lateral organizer) to add privacy to your station. Above/below and modesty screens can be used on single-sided applications only.

Collaborative Table: Specify an Empower® Collaborative table at the end of a dual-sided Empower® Workstation.

CONTAIN[®] DIGITAL LOCK SPECIFICATIONS

Digital Keypad Lock Specification Information for Contain[®] Pedestals, Credenzas, Personal Files, Lateral Files, and Towers

STORAGE

Right-Hand Keypad Lock

Left-Hand Keypad Lock

The digital keypad lock option helps modernize the workspace by eliminating the need to carry physical keys. The digital lock feature provides an alternative to standard lock and key, allowing users to simply input a code to unlock their Contain[®] storage unit. The digital keypad also supports shared applications where workstations or storage units support multiple users. These locks ship in “shared mode” by default; shared mode indicates that the lock will “forget” the paired 4-digit code after the lock is opened, allowing the unit to be used by multiple users.

❗ Order at least one Programming Key and Manager Key per install.

Digital Keypad Locks:

- Offered on all Contain[®] pedestal and undermount models.
- Ship factory installed.
- Offered in a brushed nickel finish.
- Digital keypad lock requires input of a user-selected 4-digit code.
- Digital keypad locks are powered using 2 premium lithium CR2032 batteries.
- Battery life is dependent on the frequency of operation but can last up to 5-7 years.
- **Every digital keypad installation site will require *one* Programming Key and *at least one* Manager Key, sold separately.**

Programming Key

- A Programming Key is a device used to initialize locks out of factory default mode and register Manager Keys to the locks.
- Only one Programming Key should be specified per installation site because multiple Programming Keys are not compatible with each other.
- Add-on digital lock orders should be programmed with the original Programming Key.
- Programming Key is the same key as Contain[®] Digilocks and can work across both Contain[®] and Fuse™.

Manager Key

- A Manager Key is used to bypass a locked unit; this operates as the “master key” and it is recommended that building facilitators have at least one Manager Key.
- Up to 6 Manager Keys may be registered to each lock.
- Manager Keys provide external power to locks in case of battery failure.

DIGITAL LOCK SPECIFICATIONS

Digital Keypad & RFID Lock Specification Information for Contain® Lockers

Keypad Lock Pull

RFID Lock Pull

The digital keypad and RFID lock options support applications where workstations or storage areas are shared by multiple users. This is an alternative to a standard lock and key. This feature facilitates the use of storage by multiple users through eliminating the need to keep and hand-off physical keys. These locks ship in “shared mode” by default; shared mode indicates that the lock will “forget” the paired 4-digit code or RFID badge after the lock is opened, allowing the unit to be used by multiple users.

❗ Order at least one Programming Key and Manager Key per install.

Digital Keypad & RFID Locks:

- Offered on Contain® lockers.
- Ship factory installed.
- Integral Pull/Lock design replaces a specified pull on eLock models.
- Offered in a polished silver finish.
- Digital keypad lock requires input of a user-selected 4-digit code.
- RFID lock requires a compatible RFID card or sticker.
- Digital keypad locks and RFID locks are powered using 4 premium AA batteries.
- Battery life is dependent on the frequency of operation but can last up to 5-7 years.

RFID locks require user to present a compatible RFID card or sticker to the lock in order to gain access. This is the same technology as “badge” systems that allows employers to grant employees with cards that can be scanned to gain access to entrances and buildings. HON locks *may or may not be* compatible with these existing badge systems.

- For existing RFID badge system compatibility, badges must operate on a 13.56 MHz frequency with both iClass (ISO 15693) and Mifare (ISO 14443).
- If existing badge system is not compatible with 13.56 MHz frequency, compatible RFID badges or RFID stickers are sold separately as an accessory model.

RFID lockers are available in Shared Use and can not be assigned a specific RFID card to permanently access the lock. Instead, the lock is assigned to the last RFID card that was used to lock it. Once a card is used to lock the unit, only that card can then be used to unlock it. After it is unlocked, the lock will then be unassigned until the next RFID card is used to lock it. Similar to how normal gym lockers would work.

RFID Lock Pull

RFID Cards

Digital Lock Accessory Models (page 621)

- RFID-compatible cards and stickers are sold as accessory models in increments of 5, 25, or 100.
- RFID cards are plain white and have a lanyard cut.
- RFID stickers are plain white, approximately 1” in diameter and may be added to the back of an existing badge or employee identification card.
- **Every digital keypad or RFID installation site will require one Programming Key and at least one Manager Key, sold separately.**

Programming Key

- Only one Programming Key should be specified per installation site because multiple Programming Keys are not compatible with each other.

NOTES: A Programming Key is used to initialize locks out of factory default mode and register Manager Keys to the locks. Manager Keys are used to bypass a locked unit, operating as the “master key” and it is recommended that building facilitators have at least one Manager Key. Up to 6 Manager Keys may be registered to each lock. Manager Keys provide external power to locks in case of battery failure. Programming Key is the same key as Fuse™ Digilocks and can work across both Contain® and Fuse™.

- ❗ Only one Programming Key should be specified per installation and multiple Programming Keys are not compatible with each other.
- ❗ Add-on digital lock orders should be programmed with the original Programming Key.

Due to wood being a natural material, color may differ between pieces. Stains will be tonal matches and will not replicate the grain contrast of the coordinating laminate. Prolonged exposure to sunlight can affect the appearance of wood furniture, leading to variations in hue and tone.
